Data Science & Analytics

Proactive, solution-focused data analyst with background in cognitive neuroscience, meets deadlines and has an immense drive to see projects through to completion. Possesses practical knowledge in "big data" analysis, predictive modeling, statistical inference and machine learning. Has software engineering skills necessary to build applications and utilities. Efficiently works together with multidisciplinary teams. Thrives when a problem requires fast understanding, agile data mining process and quick delivery. Likes to learn new tools and technologies, and, in general, get things done.

Core competencies include: predictive modeling, time series analysis, (Bayesian) statistics, exploratory data analysis and data visualization, programming (Python, R, Matlab, bash), machine learning, project management, neuroscience, fMRI, scientific research methodology.
Also knows: d3.js, SQL, NoSQL (MongoDB), parallel computation, probabilistic programming (Stan and PyMC3), web development, working knowledge of command line Unix (bash, worked with Linux for past 5 years), psychology.

Professional Experience

Aalto University, School of Science, Department of Neuroscience and Biomedical Engineering, Brain and Mind Laboratory, January 2011 – Present
Internationally acclaimed laboratory, performing cutting-edge neuroscientific research.
PhD Candidate
Managed research projects through the full cycle of development, including planning, data collection, analysis and scientific article writing and publication. Developed analytic software for laboratory usage. Assisted in teaching master level biomedical statistics and experimental methods courses for Aalto University students.

- Successfully accomplished multiple projects studying human brain functioning in complex naturalistic environment using fMRI, exploratory data analysis, machine learning and predictive modeling techniques.
- Significantly reduced time costs for running data preprocessing and analyzes on terabytes of neural data by developing utilities and pipelines in Matlab, R and Python and parallelizing them on available cluster computing resources. Used Git version control system. Complete toolbox is used in multiple laboratories.
- Assisted in teaching Experimental and Statistical Methods in Biomedical Research using R programming language. Supervised student experimental projects and provided tutoring.
- Presented scientific results in talks and posters on multiple international conferences.

Innova Systems, December 2009 – November 2010
Major online entertainment provider in Russia, CIS, Europe and Brazil, which has been on the market for over 7 years and has published multiple successful MMORPGs.
Customer support manager (GM)
Supported player community in technical and gaming problems, administrated live customer support system, managed events, participated in strategic development of project and its support structure.

- Increased rate and efficiency of support department response by an order of magnitude by optimization of support system, integrating it with user community and creating process guidelines for effective communication between working groups.
- Decreased rate of user problem reports by creating guidelines for solving most common issues.
- Decreased connectivity issues experienced by players by conducting a research of common causes of network problems and preparing solutions together with network engineering group.

Lomonosov Moscow State University, Laboratory of Work Psychology, November 2007 – May 2009
Top-rated institution for higher education.
Research assistant
Supported laboratory in technical aspects, provided scientific research assistance, presented laboratory achievements at exhibitions and conferences.

- Analyzed eye-tracking data for RFBR (Russian Foundation for Basic Research) project №08-06-00284a: "Microstructure of cognitive actions in consecutive and recursive performance of computerized tasks".
- Provided support in performing eye-tracking and psychological experiments.
- Presented technologies developed in laboratory at public events.

Education

Lomonosov Moscow State University, Industrial Psychology Department, 2004 – 2009
BSc, MSc in Psychology.
Master's thesis: Dynamics of human functional states while solving different computer-based tasks.

Traits

Curious, adaptive, confidently works with limited or no supervision, able to identify and troubleshoot critical issues, confident when dealing with complexity, ambiguity and uncertainty, able to manage lots of balls in the air, persuasive, tactful, able to motivate and lead, proficient at intuitive explanations of complicated concepts.

Personality: outdoorsy and moderately social person – likes bouldering in Salmisaari gym, cycle touring, and frying marshmallows on the bonfire. Musical – halfway finished Moscow conservatory (piano), plays guitar, ukulele, and sings. Dreams of making his own cooking show and has the most tactile cat in the world.
